

**University of California, Santa Barbara
Otis Williams Postdoctoral Fellowship Application
Santa Barbara Foundation 2009-2011**

Overall Description

The Otis Williams Fund at the Santa Barbara Foundation provides two years of support for post-doctoral research training at the interface of biology and engineering at the University of California, Santa Barbara. This fellowship supports traditional biomedical fields such as biochemistry, molecular biology, and cell biology coupled with UCSB's unique strengths in materials, computing, and mechanical, chemical, and electrical engineering. The highest priority applications are in the fields of interdisciplinary bioengineering projects, potentially in partnership with other members of the medical research, education and delivery field in Santa Barbara.
